Engineered Solutions
GLOBAL SUPPLY

Company Profile

Our Story

Since 1980, Hanimex has been at the forefront of Egypt's furniture and home accessories industry. What began as an import office has grown into a market-leading brand.

Today, Hanimex proudly operates ten branches and more than 1,200 employees across Egypt, serving both end customers and business projects

At the core of our production strength lies our state-of-the-art factory in Obour Industrial City, powering our sub-brand: Hanimex Industry.

Here, expert craftsmanship merges with cutting-edge machinery to deliver durable wooden and steel products that meet both domestic and international standards.

Product
Categories

Indoor Furniture

UNO is a dynamic furniture set composed of individual pieces that offer customization in layout and design. It allows for versatile space planning and effortless reconfiguration while ensuring both comfort and practicality.

Outdoor Furniture

The Solara Outdoor Set harmonizes warm teak with rose gold. Featuring rhythmic maroon, olive, and pearly back tiles, this masterclass in luxury is finished with beige fabrics, signature piping, and rich leather.

Hospitality Furnishings

Merola

Bring a statement of refined, mid-century modern design into your home with this stunning round dining ensemble. Perfectly balancing striking geometric lines with organic warmth, this set is engineered to create an intimate yet visually captivating focal point in any contemporary dining room, breakfast nook, or upscale hospitality setting.

Hospitality Furnishings

Connectors

Designed for expansive hosting, the Connectors Rectangle Set commands the room with a cinematic presence. This collection blends architectural hardware with elegant proportions, providing a grand and unforgettable foundation for large-scale social experiences.

Furniture Hardware

Welder

An exquisite blend of architectural precision and ergonomic luxury. The Welder Series features a bold, linear silhouette with a subtle, downward-tapered lever that offers a highly satisfying, premium tactile feel.

Designed to complement high-end contemporary doors, this series serves as a sophisticated hardware statement for modern residential and luxury commercial interiors.

Furniture Hardware

Mosaic

Where culinary functionality meets sculptural art, the Mosaic Series integrates premium hardware with modern forms. Featuring a subtly arched profile and soft, multifaceted lines, this architectural pull transforms millwork into an elegant statement defined by precision, light, and high-end materials.

Bathroom Accessories

Bathroom Accessories

Our meticulously curated collection of modern accessories. Designed for contemporary living, this collection seamlessly bridges the gap between minimalist organic warmth and sleek, architectural elegance.

Kitchen Accessories

Dish Rack

Our premium kitchen accessories designed where precision engineering meets high-end modern form. This collection transforms everyday kitchen tasks into an elegant, fluid experience, using premium materials that complement sophisticated interior design.

Urban Elements

This modular bench is durable, sustainable, and multifunctional, featuring a plant pot, side table, solar-powered shade, and signage space to be the ideal solution for modern urban spaces.

Urban Elements

Hancock

Combining sleek modern architecture with rugged durability, this premium waste receptacle is designed to blend seamlessly into contemporary urban landscapes, corporate campuses, parks, and high-end residential communities.

Bedrooms

Warm Minimal

This bedroom reflects quiet elegance through a soft neutral palette, warm textures, and clean, balanced lines. The upholstered headboard brings a sense of comfort and visual softness, while the overall composition feels calm, refined, and intentionally uncluttered.

Kitchens

PRO

Where culinary functionality meets sculptural art, our kitchen integrates Hanimex's legendary hardware with modern forms. These spaces transform the home into a cinematic workspace defined by precision, elegance, light, and premium materials.

Dressing Room

This open wardrobe features a strong metal frame paired with warm wood shelving, creating a modern, industrial inspired look. The exposed structure gives it a light, contemporary feel while clearly showcasing the quality of the materials and solid construction.

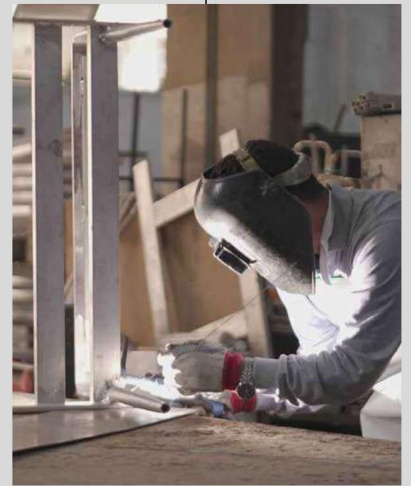

Expanding

Across the Middle East

The Siesta Collection is manufactured from fiberglass-reinforced polypropylene, offering excellent durability, UV resistance, weather resistance, and low maintenance, making it ideal for outdoor applications. As Siesta's exclusive representative in the Middle East, Hanimex plays a key role in expanding the brand's presence throughout the region. Supported by a well-established distribution network and industry expertise, we deliver Siesta's renowned furniture collections to a wide range of sectors, including hospitality, commercial, public, and residential projects.

Factory
Profile

Factory Overview

5 Production Lines Powered by 110 Machines

At Hanimex, our manufacturing process is driven by five specialized production lines, each dedicated to a specific stage of production. These lines are equipped with advanced machinery, strategically distributed to meet the unique requirements of every manufacturing stage. From material preparation to final finishing, every line is operated by professionals, ensuring that every product meets our commitment to excellence.

+250 Skilled Professionals Driving Excellence

Behind Hanimex stands a dedicated workforce of skilled professionals. Our team unites master craftsmen, precision technicians, and quality specialists who transform raw materials into finished masterpieces. Every product reflects their unwavering commitment to durability, precision, and aesthetic perfection. Their meticulous attention to detail and collaborative spirit fuel our daily innovation.

Production Capacity

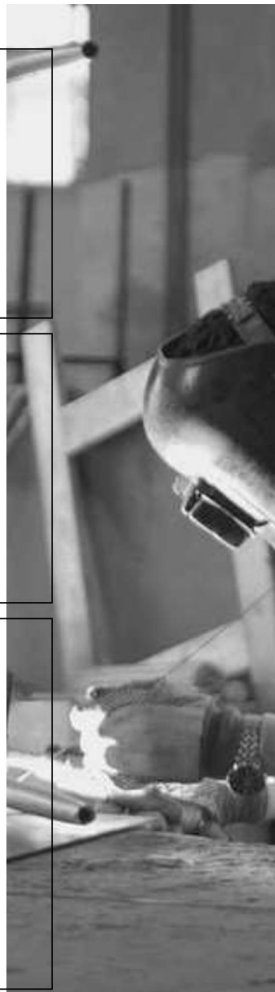

Hanimex delivers an impressive monthly output of kitchens, bedrooms, dressing rooms, chairs, tables, and dining sets. This capacity meets market demand while maintaining exceptional craftsmanship and consistent quality at scale, alongside a wide range of other manufactured products. In addition to the wide range of other products which are manufactured concurrently.

Production Lines

Metal

Metal manufacturing is driven by precision engineering and advanced fabrication techniques. Using high-quality Aluminum, Stainless steel, and other premium metals, along with modern machinery, we produce durable and reliable metal components and furniture structures that combine strength, functionality, and exceptional finishing. Our manufacturing capabilities ensure products that meet the demanding requirements of residential, commercial, and hospitality projects while maintaining the highest standards of quality and performance.

Metal

SHEET METAL BENDING MACHINE

A sheet metal bending machine, most commonly known as a press brake, is an industrial tool used to deform flat metal sheets along a predetermined axis. By clamping the material between an upper tool (punch) and a lower tool (die), it applies hydraulic, mechanical, or electrical force to create precise angles and shapes.

CNC FIBER LASER TUBE / PIPE CUTTING MACHINE

A CNC Fiber Laser Tube/Pipe Cutting Machine is a specialized industrial system designed for the automated, high-precision cutting of metal tubes, pipes, and structural profiles. It pairs high-energy fiber lasers with computerized (CNC) rotary chucks to produce intricate cuts, holes, and complex shapes with minimal material waste.

Massive Wood

Our Massive Wood Manufacturing Section is dedicated to the production of premium furniture and bespoke interior solutions, utilizing carefully selected Iroko and Pitch Pine timber renowned for their strength, durability, and natural beauty. Combining expert craftsmanship with advanced manufacturing technologies, every stage of production—from precision machining and shaping to finishing and final assembly—is executed with meticulous attention to detail. This integrated approach ensures exceptional product quality, structural integrity, and refined aesthetics, delivering solutions that meet the highest standards for residential, commercial, and hospitality environments.

Wood

THICKNESS PLANERS

A thickness planer is used after a jointer has flattened one side of a board. Its job is to take raw, uneven lumber and pass it through the machine to shave the top surface down, ensuring the board reaches a perfectly uniform, precise thickness across its entire length while making the top and bottom faces completely parallel.

AUTOMATIC INDUSTRIAL COPY LATHE

An automatic industrial copy lathe is a specialized, high-production machine used to automatically reproduce exact duplicates of a master template, part, or pattern. It eliminates the need for manual profiling, allowing factories to rapidly turn out complex, identical parts like furniture legs, stair balusters, tool handles, and engine components.

Joinery

Joinery is a part of woodworking that involves joining pieces of wood, engineered lumber, or synthetic substitutes, to produce more complex items. Some woodworking joints employ mechanical fasteners, bindings, or adhesives, while others use only wood elements.

Joinery

HOMAG CNC MACHINING CENTER

It is a CNC machining center equipped with an edge banding unit (indicated by the "BAZ" designation), allowing it to perform milling, drilling, and edging in a single setup. The machine utilizes a portal design with fixed gantries and movable tables (typically two independent tables for shuttle or synchronized processing)

AUTOMATIC EDGEBANDER

It is used in commercial furniture production and cabinetry manufacturing to seamlessly apply edgebanding tape (such as PVC, ABS, or wood veneer) to the raw, exposed edges of wooden panels.

Upholstery

Our sewing and upholstery department combines skilled craftsmanship with precision techniques to create high-quality upholstered furniture. From detailed stitching to fabric finishing, every piece is carefully crafted to ensure comfort, durability, and a refined appearance that complements our commitment to quality and design excellence.

Upholstery

INDUSTRIAL LOCKSTITCH SEWING MACHINE

Unlike standard domestic sewing machines, this is a heavy-duty, high-speed industrial model built into a dedicated sewing table. It features a top-mounted thread guide system and an integrated needle-light to illuminate the sewing area for precision work.

MANUAL UPHOLSTERY ASSEMBLY AND FABRIC-PROCESSING STATION

Before the final assembly stage, fabric or leather panels are precision-cut and stitched together using industrial lockstitch or overlock machines, with decorative piping sewn directly into the seams to provide both structural reinforcement and a refined finish. The pre-sewn cover is then carefully fitted over a high-resilience inner core, typically composed of polyurethane foam, pocket springs, or layered polyester batting, requiring skilled manual handling to ensure perfect alignment and prevent distortion. Once the cover is securely positioned, the open edge is fed through a heavy-duty sewing machine equipped with specialized feed mechanisms and high-tension needles, which compress and stitch the thick padded layers together, creating a durable, seamless closure while maintaining perfectly straight and consistent piping for a high-quality, professional finish.

Painting (Wood & Metal)

Our painting and finishing processes are designed to enhance both the durability and aesthetic appeal of every product. Utilizing advanced electrostatic powder coating for metal components and premium wood painting systems for wooden surfaces, we achieve consistent finishes, superior surface protection, and long-lasting color quality. Supported by high-quality materials and precise application techniques, our finishing processes meet the highest standards of craftsmanship, durability, and performance.

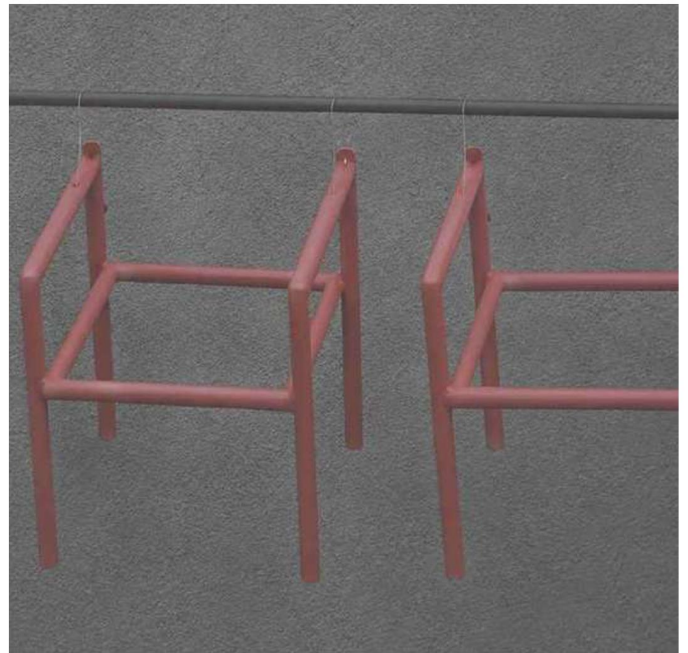

Painting

ELECTROSTATIC SPRAY PAINTING

Electrostatic spray painting is an advanced coating technique where atomized paint particles are given an electrical charge, while the target object is grounded. The principle of "opposites attract" pulls the charged paint directly onto the surface, resulting in an incredibly even, durable, and highly efficient coat with minimal waste.

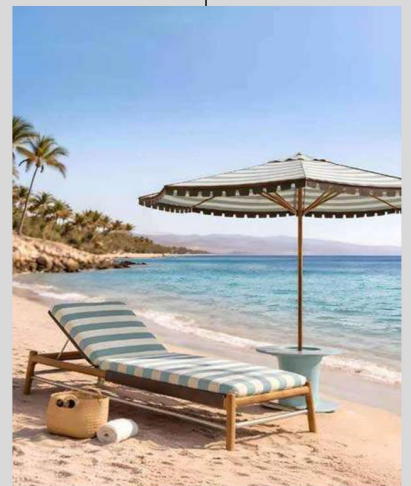

Hanimex proudly serves clients across international markets, reflecting the trust placed in our manufacturing capabilities and product quality.

Our products have successfully reached destinations including Oman, Saudi Arabia, and France, demonstrating our ability to meet diverse market requirements and international expectations.

Backed by advanced manufacturing facilities, experienced teams, and a commitment to excellence, we deliver solutions that combine innovation, durability, and refined design.

As we continue to expand our global footprint, Hanimex remains focused on building lasting partnerships and delivering products that represent the highest standards of Egyptian manufacturing to the world.
